

Electrical Safety Matting

11Kv & 15Kv (BS921)

No short cuts to safety

Since the origination of the standard for electrical matting in 1976, BS921 Safety Matting has been widely used in a variety of switchboard, high voltage, test bench and repair shop applications.

We supply 15Kv (BS921), in 3 standard roll widths (914mm, 1m & 1.2m). 11Kv Matting is also available in these same sizes.

No gaps should be left between mats; therefore we offer a fast, accurate and affordable cutting service. We will cut to your requirements, even if you only need one mat.

100% Conformity

All our BS921 mats meet the following specification, so you can use our products with confidence:

- The dimensional and physical properties meet the specification requirements
- The material is completely tested on all of its surface area and then marked with the manufacturers mark, date stamp and test standard

However, please remember that switchboard matting should not be used as the only form of electrical protection, health and safety guidelines must be followed at all-times.

Available and Affordable

Our matting is available from stock and we will cut it to any size you require. Please note that the standard length of matting is 10 metres but we can supply in longer lengths if required.

For more information, quotations, stock and sales please feel free to contact us.

Ashton Seals stock a complete and versatile range of material, including compressed synthetic fibre, neoprene, nitrile, EPDM, butyl, silicone, Viton® and polyurethane elastomeric sheet.

In addition, we maintain large stocks of various grades and thicknesses of plain and rubber-bonded cork, gasket paper, felt, plain and reinforced graphite, vulcanized fibre, plastic and sponge materials and virgin, filled and/or expanded PTFE. As might be expected of a company with our experience, we recognise and can certify to most British and many other Foreign standards.
